

Activu Corporation is an Information Technology and Services company delivering true end-to-end network solutions for mission-critical command and control room environments. With a team of dedicated engineers, Activu designs, builds, deploys and supports full turnkey, net-centric video display wall systems to help organizations improve collaborative information sharing and decision making.

For more information visit
www.activu.com/mobility.

Activu Mobility allows command center and other mission critical visual information to be securely viewed in the field on Android smartphones, iPhones, iPads and other mobile devices. Field personnel with smartphone cameras can also capture and instantly send photos and even full motion video to the command center, or elsewhere, for display, analysis and/or archiving.

Highlights

- Ideally suited for Emergency Response, Public Safety Agencies, Private Sector Security, Command Center and Control Room Monitoring
- Securely view mission critical information in the field
- Capture and send photos and video from the field to the command center
- Tag, zoom, crop, and annotate photos and videos from the field
- Optimized to stream very high resolution multi-source, mixed media content at lower frame rates
- Compatible with Activu 5.0 Software Suite

Key Features

Send Mode

In 'Send Mode' photos/videos can be cropped, zoomed, annotated and sent to the command center. They can be tagged with GPS coordinates, date, time, and user ID. Geocoding enables photos and videos to be automatically displayed in the correct location on an area map at the command center. Or Activu can be programmed to automatically select the appropriate background map(s) to add geographical context to photo and video content sent from the field.

View Mode

In 'View Mode' even very high resolution content, such as an aggregated data wall display, can be perfectly viewed, zoomed and scrolled through on a smartphone screen using multi-touch.

Control Mode

'Control Mode' allows a smartphone or wireless pad to act as a full function Activu remote control: in the command center, control room, briefing room, or in or from the field.

SECURITY

Activu Mobility uses industry standard secure communication channels. In addition, Android and iOS both support VPN tunneling. The user interface, control functionality and content access are defined by user or user group and can be changed at any time. Neither the user interface nor source content are stored on the mobile device.
